Job Title: Full Stack Developer

Job Title: Senior LLM/AI Product Engineer

Company: CoEditor

Position Overview: CoEditor, a new company within a leading publishing group, is seeking a Senior LLM/AI Product Engineer to join our team. You will lead the design, development, and deployment of innovative software solutions leveraging AI and Large Language Models (LLMs) to create industry-leading tools for publishing. Working closely with cross-functional teams, including product managers and domain experts, you will ensure our software systems are scalable, secure, and high-performing. Your role will be crucial in rapidly developing and iterating proofs-of-concept, staying abreast of advancements in AI and LLMs, and acting as an internal evangelist for AI technologies.

Key Responsibilities:

- Lead the design, development, and deployment of software solutions utilizing AI and LLM technologies for the publishing industry.

- Collaborate with cross-functional teams, including product managers and domain experts, to discover, build, and iterate on innovative features and products.

- Ensure the scalability, security, and performance of our software systems.

- Rapidly develop and iterate on proofs-of-concept to test new ideas and hypotheses, efficiently validating and evolving our software solutions.

- Stay updated with emerging trends and advancements in AI, LLMs, and software development to continually enhance our product offerings.

- Act as an internal evangelist for the use of AI and LLMs, providing expert guidance and insights to other teams within the organization.

Requirements:

- Bachelor's or master's degree in Computer Science, Engineering, or a related field, or equivalent experience.

- Minimum of 5 years of experience in software development, with a demonstrated ability to thrive in ambiguous and rapidly changing environments.

- Proven track record of contributing significantly to the successful launch and scaling of new and innovative products.

- Proficiency in modern frameworks/languages such as Python, JavaScript, Java, Golang, Scala, etc.

- Exceptional collaboration and communication skills to effectively engage and work with stakeholders from diverse disciplines and varying levels of technical expertise.

- Ability to translate complex technical concepts into clear, actionable insights for all audiences.

- Experience with AI technologies, particularly in LLMs and machine learning.

- Familiarity with cloud infrastructure (e.g., AWS, Azure, GCP) and the full end-to-end process of modern software deployment.

- Experience in the publishing industry is a plus, but not required.

- Proven ability to lead and build a development team.
